EDUCATION

Georgia Institute of Technology **Atlanta, Georgia**

Bachelor of Science in Computer Science *Graduation: May 2027*

- **Concentrations:** Cybersecurity/Privacy - Intelligence
- **Related Coursework:** Computer Networking, System & Networks, Computer Organization & Programming, Introduction to AI, Machine Learning, Data Structures & Algorithms, Design & Algorithm, Computing in Python, Object Oriented Programming, Objects and Design, Discrete Math, Linear Algebra

TECHNICAL SKILLS

- **Programming Language:** Java, Python, JavaScript, HTML/CSS, SQL, Ansible (YAML)
- **Framework & Tools:** Git**,** GitHub, API, React, IntelliJ, Visual Studio Code, PostgreSQL

EXPERIENCE

Georgia Tech Research Institute (GTRI)

IT Intern *February 2026 – Present*

- Developed and maintained **Ansible automation scripts** through **Red Hat Ansible Tower** to automate software installation and post-installation configuration across Ubuntu and Rhel systems
- Administered **5+ Jamf Pro** policies, configuration profiles, and scripts to manage macOS endpoints and automate software deployment
- Assessed and remediated **CMMC-related security configurations** across Windows, macOS, and Linux verifying **FIPS, disk encryption, security banners, and endpoints security agents**
- Provisioned **50+** Windows devices using **SCCM** and supported Apple devices enrollment and management through **JAMF and Workspace ONE**
- Provided technical support for **500+ endpoints** in a **300+ staff** research environment, handling **40+ support tickets weekly**

Sport Oracle – React, Express, PostgreSQL, API, Socket.io, Python, JWT, Cookies

Collaborative Personal Project – Full Stack Developer *July 2025 – Present*

- Co-developing the design and development of a full stack web application using **React** and **Express** to predict players' performance using previous years' stats and **Python** – based analysis achieving a **62% accuracy**
- Implemented secure authentication with **JWT** and **HTTP-only cookies**, and optimizing **PostgreSQL** queries for efficient data retrieval
- Building a real – time chat feature with **Socket.io** with **PostgreSQL** integration for persistent message history

Georgia Institute of Technology VIP – Python, Jupyter Notebook, Pandas, Matplotlib

Vertically Integrated Project– ECG Data Analysis Lead *January 2025 – May 2026*

- **Led** a team of **4** in ECG data analysis, coordinating research tasks, data preparation, and review of analytical results using **Jupyter Notebook**
- Analyzed ECG data from **100+ participants,** calculating BPM, HRV, and RMSSD using Python, Pandas, and Matplotlib
- Compared device-reported heart rate values with independently computed BPM, observing **98%** agreement across participant data

WanderSync – Java (Android SDK), Firebase

Collaborative School Project – Android App Developer August *2024 – December 2024*

- Designed and created an Android App using **Java** and **Firebase** that to help users to plan trips, managing dining reservations, accommodations, and vacation days, which has been used by **20+** Georgia Tech students
- Collaborated with **3 backend developers** using Java to integrate Firebase for real-time database management to allow accurate tracking of reservation and accommodation
- Developed and implemented a user-friendly interface that allows users to efficiently manage over **dozens** of trips
